

Cyber Investigator Pathway™

Platinum 

Introduction

Cyber investigations are a core element of many types of investigations in the 21st century.

Not all investigators will be investigating cybercrime, but they will most likely be including cyber or digital elements in their investigative plan.

The Platinum 3P **Cyber Investigator Pathway™** is designed to provide new or experienced investigators with the skills they need to conduct cyber investigations **lawfully, effectively, and safely** to the highest standard.

Delegates who undertake the **Cyber Investigator Pathway™** will select a minimum of 3 Core Modules and a minimum of 2 Optional Modules to achieve the **Cyber Investigator Pathway™ certification**.

We understand that not all investigators need the full 'toolkit' and we have carefully designed our modules to take this in to account.

All our modules are offered as **individual elements**, so are available to delegates who do not wish to complete the full **Cyber Investigator Pathway™** immediately, but will count towards the certification later, if requested.

Some Core Modules are offered as optional **BTEC Awards and Certificates**, and more qualifications will be approved during 2022. The BTEC qualifications are marked as such in the module outlines.

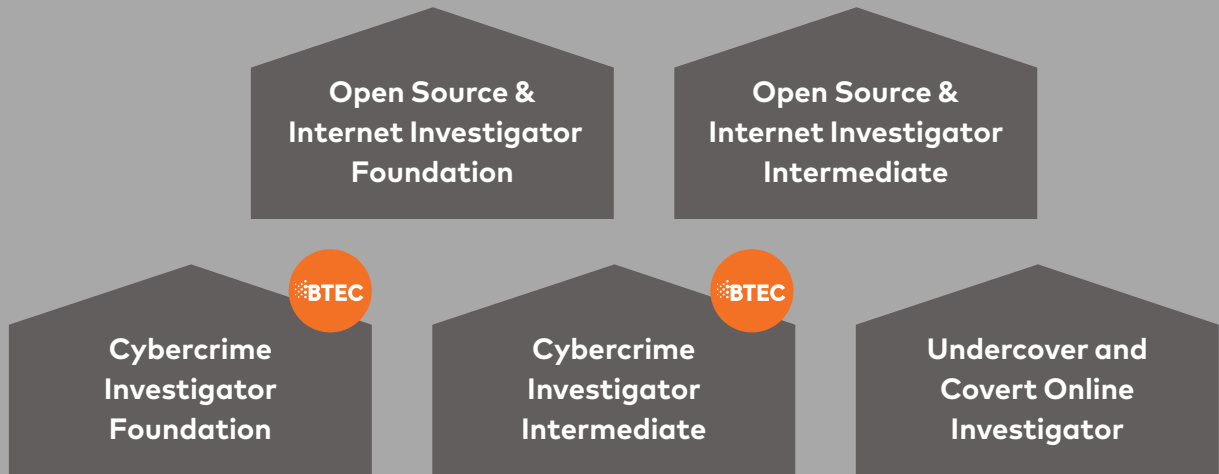

Platinum 3P Ltd have provided cyber training, consultancy, and investigation services in over **30 countries** and on behalf of governments, financial institutions, law enforcement agencies, commercial companies, academic bodies, and NGO's such as the United Nations.

BTEC qualifications are offered in partnership with 'QA Associates' a 'BTEC and Pearson Approved Assessment Centre'. The qualifications are not available from any other BTEC, or Pearson approved centre.

Our people are drawn from UK law enforcement, military, psychology, academia, law, and the commercial sector. We are used to operating in the most sensitive of environments and have experience of cyber investigations dating back to 1998. You can contact us at **info@platinum3p.co.uk**

Cyber Investigator Pathway

Core Modules

BTEC (SRF) Level 5 Professional Award in Cyber Investigations
BTEC (SRF) Level 5 Professional Certificate in Cyber Investigations

Optional Modules

To achieve the Cyber Investigator Pathway Certificate, delegates should complete at least three core modules and two optional modules. However, all modules are deliverable as stand-alone courses.
